

In addition to the conventional and advanced methods of NDE that Olivier International® offers, we also offer Regulatory and Compliance Services. Our knowledgeable Compliance Technicians perform pre-BSEE audits, API 14J facility surveys, and comprehensive SFD/Safe Chart reviews. Our team has over 20 years of experience and has proven success in both onshore and offshore safety system verification and auditing.

Olivier International also has ASNT-certified Field Technicians available to perform OOOOA/GHG, Subpart W/GHG/LDAR, and Method 21 surveys as required by the EPA. Without interrupting production, our team can visually identify and document fugitive gas leaks in a fast and minimally intrusive manner. Our team of experienced technicians

can scan process piping and equipment to ensure all valves, PSVs, and equipment are operating as designed, verifying that no gas leakage is occurring. The mechanical and electrical IR surveys we perform benefit our clients by minimizing unscheduled system upsets and unplanned downtime.

Furthermore, Olivier International offers

state-of-the-art optical gas imaging (OGI) services to clients in the oil and gas, power generation, energy service, and chemical/petrochemical manufacturing sectors. By employing the state-of-the-art FLIR GF320 and GFx320 optical gas imaging cameras and Sound Detect Acoustic Imaging cameras for Leak Detection and Repair (LDAR), our experienced and trained employees can assist our clients in meeting sensitivity standards defined in the US EPA's OOOOA methane rule and in meet reporting requirements. Add a FLIR QL320 quantification system to measure leak rates for methane and other hydrocarbons, eliminating the need for secondary sampling with a toxic vapor analyzer or similar tool.

By finding leaks and fixing them quickly, companies can protect the environment while avoiding product losses and regulatory fines. Our technicians safely scan for gases at great distances on difficult-to-monitor components, check thousands of connections quickly, and pinpoint the smallest leaks.

- Pre-BSEE Audits
- API 14J Facility Surveys
- OOOOA/GHG
- Subpart W/GHG/LDAR
- Acoustic Imaging Services
- Comprehensive SFD/Safe Chart reviews
- Method 21 Surveys as required by the EPA
- State-of-the-art Optical Gas Imaging (OGI)
- ASNT-Certified Field Technicians
- Over 20 years of combined experience
- Proven success in both onshore and offshore safety system verification and auditing
